CAFE MANAGING SYSTEM

INTRODUCTION

The Cafe Managing System is a web based application design to streamline the operations of the cafe, making it easier to manage orders, track inventory, and enhance service. This project was developed as a part of collaborative effort to demonstrate practical web skills while addressing real-world bussiness ideas

PURPOSE

Cafe & Netik

Purpose of the Website

The purpose of this website is to assist the staff of CAFE & NETIK in streamlining daily operations and enhancing service quality. By providing a centralized platform, the website will enable staff to:

- Accurately receive and track customer orders
- Efficiently manage takeaway and delivery requests
- Clearly and systematically handle table reservations

This digital solution is designed to minimize human error, improve communication, and ensure a smoother workflow—ultimately creating a better experience for both staff and customers.

CONCEPT

concept

The Cafe Managing System was inspired by the challenges faced by small café owners and staff in managing daily operations efficiently. Many local cafés still rely on manual processes—such as handwritten orders, Excel-based inventory tracking, and cash registers—which can lead to errors, delays, and inefficiencies.

The motivation behind this project was to create a simple yet powerful digital solution that automates key café operations, reducing human error and saving time. Whether it's a busy coffee shop struggling with long queues or a small bakery needing better inventory control, this system aims to provide a cost-effective and user-friendly alternative to expensive commercial POS (Point of Sale) systems.

Additionally, this project served as a way to apply real-world web development skills in a practical scenario, demonstrating how technology can solve everyday business problems.

The primary users for this system include cafe owners, teenagers (early 20s) and staff member.

DEVELOPMENT

FRONTEND

BACKEND

ADDITIONAL FRAMEWORKS

DEVELOPMENT

USER FRIENDLY DASHBOARD

- Clean, intuitive interface for quick navigation.
- Role-based access (Admin, Staff) with different permissions.

ORDER MANAGEMENT SYSTEM

- Real-time order tracking.
- Table/seat assignment for dine-in customers.
- Easy modifications (add/remove items, apply discounts).

SALES & ANALYTICS

- Daily/weekly/monthly sales reports.
- Best-selling item tracking for better inventory planning.

RESPONSIVE DESIGN

Works smoothly on desktops, tablets, and mobile devices.

ENHANCEMENTS & FUTURE UPDATES

ENHANCED UI/UX

- **Dark mode option for better visibility in low-light café environments.**
- **Animations & transitions for smoother interactions.**

PERFORMANCE & SCALABILITY

- **Caching mechanisms for faster load times during peak hours.**
- **Multi-branch support for café chains.**

ADVANCED FEATURES

- **Customer Loyalty Program - Points/rewards system integration.**
- **Online Ordering - Allow customers to place orders via a web/mobile app.**
